

15.1 Reports

The Study Managers will email Recruitment Tracking Logs to NCI and Westat on a weekly basis. Westat staff will consolidate and provide accrual reports using data from the Recruitment Tracking Logs to NCI on a regular basis. These reports will track each site's weekly/monthly/cumulative activities and contribute to overall study coordination. Westat's weekly accrual report will include totals and percentages of cases and controls accrued, the number and percentage of scanned images and data entry by form for each site; the percentage of eligible subjects with anthropometry collected; percentage of eligible subjects with biospecimens collected; the expected time to study completion for each site.

Westat will also provide NCI with a Participation Summary that will calculate the response rates among cases and controls at each site and summarize the reasons for non-participation. This information may help NCI determine if refusal conversion efforts are needed or additional districts should be added.

15.2 Monitoring

Study activities, consistency across sites, and progress will be monitored by use of a variety of methods. Frequent personal communication by email and telephone will be a high priority. For example, conference calls with individual sites and with all sites will be conducted periodically to discuss recruitment and participation progress and study issues. An agenda will be developed prior to each call and minutes and action items will be distributed following each call.

Each site will utilize study management processes and systems which have been historically successful for their site. Data Entry staff will complete a Data Entry Transmittal Form for each participant. An example of this form is displayed in Appendix 15-1. This form monitors whether any forms were not collected, not scanned, or not entered twice into the Data Entry and Management System. Westat will expect to receive scanned images and two data entries for each of the applicable forms for a participant. If any image file or data file is not received, the Study Manager will be

notified and asked for the reason for the lack of data. The Study Manager can examine the Data Entry Transmittal Form and provide the explanation. Please note that the Data Entry and Management System also contains a field on each participant record to record “Comments” about the data entry process. If there are any problems during data collection or data entry which could have an effect on data quality, please record those problems on both the Data Entry Transmittal Form and in the Data Entry and Management System (please refer to Chapter 16).

15.3 Quality Control

Quality control measures will be developed and implemented prior to study start and as the study progresses. Other chapters list quality control procedures or protocols specific to the activities described in those chapters.

Westat will maintain a Data Decision Log of data collection issues identified during the data editing process. For details about the Log, please see Chapter 17, Data Management and Processing. As a quality control measure, this Log will be periodically reviewed in order to detect data collection difficulties. Additional instructions, documentation or enhanced training may be needed to resolve the data collection issues. Westat will also maintain a Study Decision Log to document decisions regarding the study protocol that may impact the data. This includes items such as, for example, the date of implementation of the stool protocol, the date interval that a scale was out of service and the decision about how to handle the measurements during that time, and decisions about adding eligible districts. The Study Decision Log will be provided to NCI at the conclusion of the study or upon request.

15.4 Supply Inventory

The Study Manager will maintain an inventory of the supplies and study forms remaining at the end of each week and record this on the Supply Inventory sheet in the Recruitment Tracking Log. Westat will monitor the inventory closely to anticipate when supplies and forms will be needed at the sites. Westat will review the supply counts against the enrollment counts on the tracking log to make sure the supply counts are reasonably accurate. As supplies are received at the sites, the Study Managers will update the Supply Inventory counts.
